**INFORMATION SYSTEM**

**CS 262- Advanced Concepts in Web  
Development**

**INSTRUCTOR: Nguonchhay Touch**

**ACADEMIC YEAR: 2019-2020**

**PROJECT-REPORT: GROUP 1**

## **Project Name**

Covid-19 Informal management

## **Why we choose this topic?**

We choose this project because we focusing on developing an alternative for people to get these information and knowledge easier rather than from TV. We see the opportunity that we can provide various news around world form different countries for people who needed. This platform can help heightening their knowledge and enhance their ability to know and understand about the world.

## **Problem statement:**

The purpose of creating this website, is that the impact of the corona virus is having a profound and serious impact on the global economy. With that in mind, the world is facing serious danger, many countries have to prevent their people by quarantines, lock-downs all businesses across the country. Thus the globe will encounter an economic crisis as well as it will affect thousands of public goods such as hospital, school, restaurants, cinemas, transport providers, hotels, shops. Moreover, it also affects the international trade as well like many buyers and retailers are come with a final conclusion of becoming more reluctant to buy from China and will add to the pressure on customers trying to shift their supply chain away too. Therefore, we come up with a team to minimize the impact of this epidemic.

## **Project Scope:**

Our will project scope will cover all the information related to Covid-19 such as giving the definition of this deadly virus and explaining on how to prevent this virus from spreading as well as following the policy of “social distancing” less social interaction so they can decrease the transmission as well as understand how much this virus can cause enormous damages to the world. Furthermore, this website will illustrate the data that we keep track about the death cases and alive cases around the world.

## **How my team build this platform?**

Basically, We built this website by install a fresh laravel Project.

First of all, we integrate bootstrap

<https://bootstrapmade.com/demo/Moderna/>

Secondly, we start to insert several features and insert data which related to:

Active cases, Total cases, Total recovered, Total death

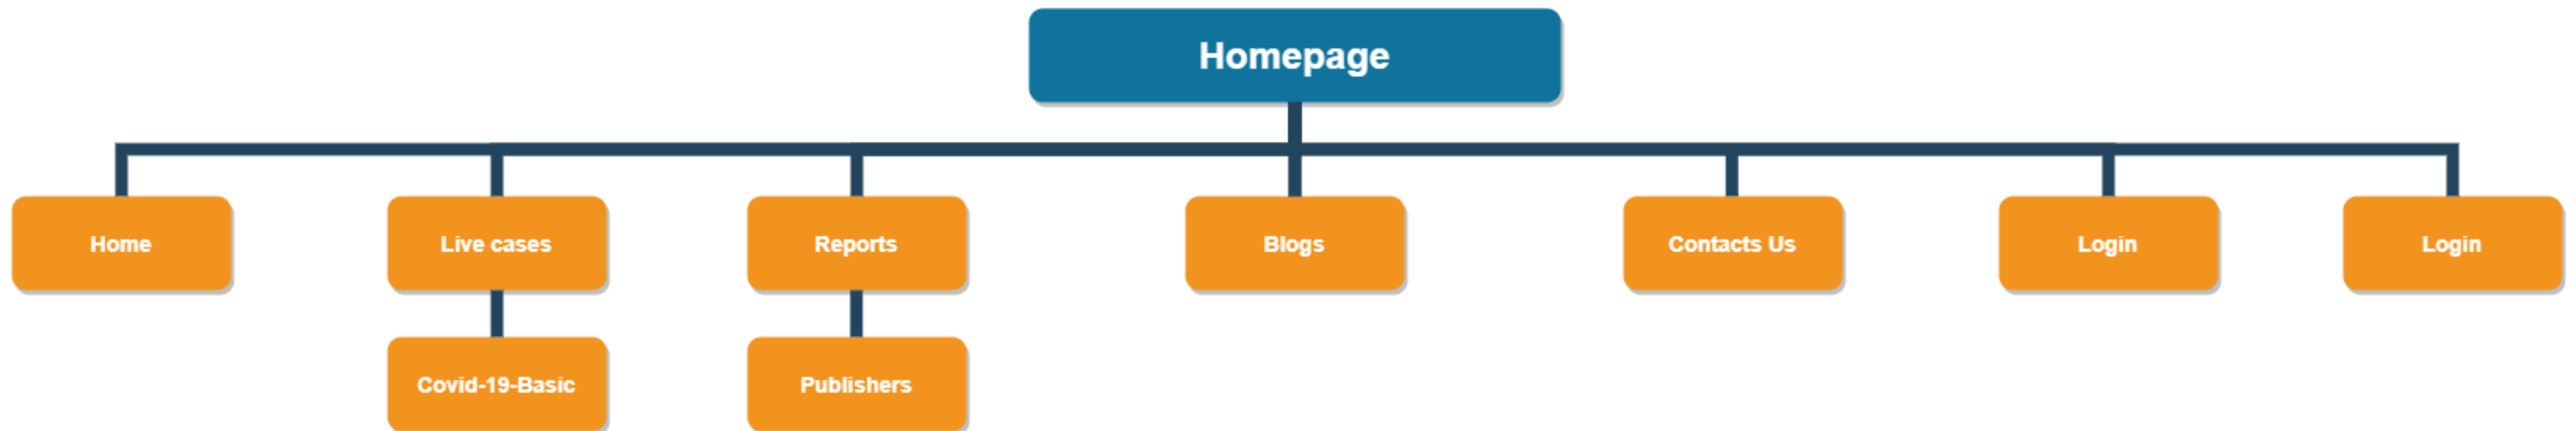

Thirdly, include significant information related to brief introduction, symptoms, Protection.

## **Special Features**

1. Friendly access between pages
2. Illustrate current COVID-19 Cases
3. Login/Registers

## Here is our site map:
