Final Report

Our project was about the Covid-19 Informal Management. Our marvelous websites consist of multiple special features which are authentication, friendly accessible between pages, review our websites and allows users to publish their post effectively. First of all, authentication which mean connecting between our website and database. Our authentication system includes both login and register which allow normal user and publishers to use. Secondly, the accessible between pages, basically, it fast, smooth and connectable between each page, therefore, our user can access through pages conveniently. Thirdly, the review system, which mainly focus on the recommendation of the users as well as the publisher on our page. Specifically, users can see our past comments within the about us pages without any registration. However, users can only review by register and login to our page first page, before we allow another dropdown page which is call Review in the authentication system. This review system empowers them to bring out their suggestion based on their user experiences, the flow between pages and all the functionality(backend). Last but not least, it allows users to publish their news within our Report page which related Covid-19. We will provide a table which consist of country name, total case, total death, recover, total active and new cases. Most importantly, this publish function only appear when our reporters or publishers to registers to our pages first, then it will provide a publish page which is call dashboard under our authentication system. After our publisher post their news in the dashboard pages, it's automatically shown a table in our report page. Furthermore, our publisher can also show, delete and edit their news after they have posted it.
